A Statistical View of The Right to Vancouverism: Social Reproduction Placemaking in the Revanchist City

Gian Carlo Diluvi*

Client: Cheryl-lee Madden

June 2021

1   Introduction

reference blog post and talk about the 2018 chs.

statistical questions:

Q1: how sound are statistical analyses in blog post?

Q2: can we expand that analysis to account for low-income women?

Q3: can we deep dive into vancouver?

2   Statistical Considerations of the 2018 CHS PUMF

mention that pumf cannot be used for statistical analyses.

give reasons for this, citing the user's guide.

mention that the whole file can be used for this, but access is not public and has to be requested.

also, the pumf is aggregated at the vancouver/other cities/rural level, i.e. there are no neighborhoods in vancouver.

however, the whole file is more granular, so that could be used.

mention possible models that can be used and give references.

3   Exploratory Data Analysis

here we replicate some of the plots in the blog post but separating by gender and only for bc.

mention how gender is calculated in survey and limitations.

show plots, explain.
